

George Rogers Avenue (Hospital Connector) – (CD-47)

George Rogers Avenue (AKA the Hospital Connector) is a new east-west roadway that will connect the roundabout at the Intersection of McClure Bridge, Irvindale Road and West Lawrenceville Street and Abbotts Bridge/SR120 adjacent to the proposed new entrance to Duluth High School. The new roadway will improve traffic operation by developing a grid system near the City Center and will lessen traffic congestion, improve pedestrian access to downtown and enhance connectivity. The proposed ¼ mile roadway will have multi use paths on both sides and a raised median, which will be sodded until future landscaping is installed.
